

Weekly SCRUM

What has the team done towards the project this week?

- meet with client and clarify more project details
- merge address and parcel data for the cities as well as statewide
- pre-process the duplicated data

What work does the team plan to do this week?

- find a way to merge the whole statewide dataset
- try to plot a map which can show the residential density in each parcel.
- try to figure out what causes the duplicates.

Is the team having any issues?

- We haven't found a good way to process the misinformation of the provided data.
- We need to know why there are duplicated data. And how to detect the wrong data in the address dataset.
- We need a process to detect whether a building is a residential building or a commercial building. And only consider the residential buildings when we calculate the residential density.
