

Weekly SCRUM – 04-04-21

### **What has the team done towards the project this week?**

We dealt with duplicated data, tried to figure out the reasoning behind it such as we need to get rid of nonresidential properties which could help with the duplicates.

We filtered the dataset by the residential USECODES which has the number 0,1 and 9. We found all the different kind of commercial properties that are supposed to be residential USECODES.

We looked through every single style of properties. Since the residential USECODES had commercial properties, we only needed to look at the Residential ones and we are trying apply that in the Quincy Dataset.

### **What work does the team plan to do this week?**

This week we will meet with Tom and get more clarification regarding what we did was accurate. Then later apply that for the entire state and calculate the population density of that.

We also need to make decision based on mixed use properties so that we can accurately calculate the residential density. We have to do this by comparing the assessors record and the address count.

### **Is the team having any issues?**

Figure out whether to use the assessors record and the address count based on each property.
