

Weekly SCRUM

What has the team done towards the project this week?

- Uploaded CoLab notebook to github
- Implemented sjoin on our Quincy data to merge parcel and address data
 - Our method before was not optimal, so implementing this was necessary
- Began to calculate density of quincy - not finished

What work does the team plan to do this week?

- Individually upload all data files to our personal github, so we can work simultaneously
- Figure out how to calculate density using the merged file
 - Also making sure this is correct
 - Alex noticed when he implemented sjoin that it generated way more points than we originally had - might not be working correctly?

Is the team having any issues?

- Making sure our process is producing accurate results and not just results
