Weekly Project SCRUM Report 3
Date: 03/31/21
Project Name: Relationship between health insurance access and coverage on COVID rates (recovery & death) and vaccination access
Team Members: Linsy Wang, Sooyoun Lee, Dana Zheng
Tasks Completed This Week: - Cleaned and processed 2018 US state health insurance dataset - Visualized relationships between state health insurance and state COVID-19 confirmed/death rates using Matplotlib
Plans for Next Week: - Meet with Professor and Yifu to discuss major project concerns - Search for more information/scrape data regarding US counties - Brainstorm factors other than health insurance that may impact COVID-19 rates - Make the Early Insights powerpoint slides and prepare for presentation - Discuss how to move forward with our project and complete Project Deliverable 3
Obstacles and Questions: - Our current observations imply that there is no direct relationship between health insurance rates and COVID-19 rates within US states. - We do not know how to move forward: If we should focus on searching for more data on US counties, or work on a different topic than health insurance?
Met with the client recently? When is the next meeting? - Met 03/30, next meeting 04/06
